NASTROPACK NP 01 LC EV

TAPE-SEALER FOR STANDARD-SIZE CARTON BOXES

A machine for the automatic sealing of standard-size carton boxes (units with fixed height and width). Two simple and fast manual hand-wheel adjustments allow the setting of the machine to the required box size. The bottom and the top flaps are simultaneously sealed (the carton box must be introduced in the machine with the top flaps already closed). Ideal solution for carton boxes with a maximum 50 cm width and height.

SPECIFICATIONS

- Side pressure rolls with 3 wheels positioned in multiple places, for a better side pressure of the carton (to keep the upper flaps approach even in the presence of bulging/swollen/filled cartons)
- Millimeter scale fitted as standard on the machine frame, for an easy and quick adjustment of the upper assembly depending on the height of the carton which has to be taped
- Device "close three flaps" to facilitate and speed up the inclusion of carton... with a consequent increasing of the productivity
- Max width of the cartons: 480 mm
- Max height of the cartons: 480 mm
- Min width of the cartons: 140 mm
- Min height of the cartons: 120 mm
- Special solutions available for different sizes
- Taping head with a new roll to reduce noise during the detachment of the mother tape, during the conducting of the tape
- Blue color (main structure of the machine) and yellow color (moving parts)

CASE TAPE MACHINE WITH TOP AND BOTTOM DRIVING SYSTEM

The best solution to close the most unstable carton boxes

SPECIFICATIONS

- Appearance: more vivid color, modern, fresh... and still improved machine structure in several small parts
- Millimeter scale fitted as standard on the machine frame, for an easy and quick adjustment of the upper assembly depending on the height of the carton which has to be taped
- Max width of the cartons: 600 mm
- Max height of the cartons: 500 mm
- Min width of the cartons: 140 mm
- Min height of the cartons: 120 mm
- Blue color (main structure of the machine) and yellow (moving parts)

SEMI AUTOMATIC CARTON SEALING MACHINE

The self-conforming/random-size machines with lateral driving system ideal for every type of carton boxes. The most suitable solution to close automatically different size of carton boxes. Once the carton is filled and positioned on the machine, after a simple and light pushing the height of the taping unit and the width of the side drive belts automatically adapt to the dimensions of the box itself allowing the carton box to be driven through the machine for the simultaneous application of the self-adhesive tape on the top and on the bottom side. The robust, elegant and "fresh" structure of the machine, together with its characteristics and technical solutions make this machine very appreciated by the wide number of world wide Customers that have selected it for the packing operations.

SPECIFICATIONS

- **Dimensions of the carton boxes:**
 minimal width 140 mm – maximal width 480 mm
 minimal height 120 mm – maximal height 500 mm
 minimal length 150 mm – maximal length without limitation
- **Simultaneous application of the self-adhesive tape** on bottom and on the top side of the carton during its passage through the machine with possibility to adjust the front and the rear leg length
- **Working tension:** single-phase, 220 volts
- **Compressed air consumption:** depending from the specifications and the dimensions of the carton boxes (indicatively 3,5 – 4 nl/cycle) at a pressure of 6 bar
- **Side safety panels** in transparent execution, protecting the area close to the movement of the upper sealing and driving unit

TAPE-SEALER FOR STANDARD-SIZE CARTON BOXES

A machine for the automatic sealing of standard-size carton boxes (units with fixed height and width) with simultaneously sealing of bottom and top flaps of the carton box. An adjustable pneumatic working device assuring the automatic closing of the top flaps gives the possibility to position this machine, not requiring the constant presence of an operator, inside fully automatic packing lines. Two simple and fast manual hand-wheel adjustments allow the setting of the machine to the required box size. The ideal solution for carton boxes with a maximum 50 cm. width and height.

SPECIFICATIONS

- **Power supply:** 230 V - 1 Ph - 50 Hz
- **Power required:** 0,6 kW
- **Machine dimensions (LxWxH):** 1500x900x1600 mm
- **Machine weight:** 280 kg
- **Compressed air consumption:** 4 NI / 6 bar
- **Output:** up to 20 pz/min
